- Project Management Services

According to the geo-security situation **C4S** defines the risk mitigation strategies, carrying-out studies to evaluate the criticality of the assets, determine the nature of potential threats, and assess the potential consequences of security events on the various facilities.

Taking into consideration the most likely threats for the project, such as terrorism, crime, sabotage, theft, militant activism, insider action, the analysis will determine the impact and the measures to mitigate the risks.

Methodologies suit to any sensitive sector and are especially adapted to critical Industries such as Defense, Energy, Oil & Gas, Industry, and Transportation.

**C4S** recommends appropriate and adapted security solutions through comprehensive and detailed security systems design.

Physical & technical countermeasures, access control, perimeter protection, intrusion detection, video surveillance, supervision and more innovative technologies are combined in order to protect assets and people in accordance with the findings of the Risk Analysis.

*Enjoy a secure world!*
